

The €o Content Engine.

Build an AI system that writes, designs, and posts your content
— every day, on brand, while you sleep. No camera. No editor.
No paid tools.

AI THAT RUNS YOUR MEDIA BUSINESS

It was never talent or credits.

Most people quit posting for one reason: every piece depends on *them* — to film it, edit it, or pay for a tool. Motivation runs out. Credits run out. The feed goes quiet.

Consistency is not a discipline problem. It's a **systems** problem. A machine that needs you at 9pm isn't automation — it's a night shift.

The fix: decouple every step from you, and from anything you have to pay per-use.

One endpoint. Free inference.

Every serious AI lab gives away a free tier — a few million tokens a month. Alone, each is a toy. **Stacked behind one gateway**, they add up to ~1.7 billion tokens a month of working capacity.

- Run a single OpenAI-compatible gateway (e.g. a self-hosted aggregator) over 10+ free providers.
- One key for your apps; it routes + fails over automatically.
- This writes every hook, script, and caption — at €0.

The brain is free. Most people are still paying per word.

Credits are a trap.

The moment your content depends on a paid generator, your consistency has a meter on it. The instant credits hit zero, output stops.

So don't generate — **design**. Code renders premium video and graphics for free, forever:

- **Reels** — designed motion slides (SVG/HTML → frames → ffmpeg). Cinematic, on brand, €0.
- **Carousels** — the same brand system, rendered as images.
- **Voice** — free neural TTS when you want narration.

Reserve paid video for the rare hero piece. The daily machine runs on design.

One brief → every format.

Stop making posts. Make a [parametric template](#) and feed it briefs. A single structured brief becomes a 5-frame carousel *and* a matching reel — automatically.

- Lock your brand once: palette, fonts, layout grid.
- Template takes a brief (hook, points, CTA) → renders files.
- The LLM writes the brief. The template renders it. You touch nothing.

Topic → brief → carousel + reel + caption, in under a minute, at €0.

Inventory over inspiration.

You don't need a posting bot. You need a **backlog the bot can't run dry**. Inspiration is just queue depth.

- **Decouple** sourcing from posting — two pipelines, not one chore.
- Stage 30 posts to a queue on **hold**.
- **Approve a batch**, not a post. One human gate, then it fires.

Stock the shelf once; sell from it for weeks.

It posts while you sleep.

A scheduler (cron or a workflow tool) does the last mile: pull the next approved item, publish to the platform, log the result.

- Daily: generate + queue 1 reel + 1 carousel.
- Auto-publish the approved queue to IG + YouTube on a timer.
- Log views/engagement → kill losers, scale winners weekly.

Automate the production line. Keep your hand on the kill switch.

Don't wait for the fund.

Creator funds are slow, region-locked, and thresholdy. The durable money sits one layer closer: [a simple product the audience can buy](#).

- The moment you have any audience, point a CTA at a landing page.
- Sell one simple digital product (a kit, a template, this very guide).
- Creator fund becomes a bonus, not the plan.

**The content is the ad. The
product is the income.**

Paste these into any free AI.

BRIEF → "You are my content writer. Write a 5-frame carousel/reel brief on [TOPIC] for [NICHE]. Output: a Hook (3 lines ≤3 words, last = payoff), a Reveal (2 lines ≤7 words), one contrarian aside, a named Pattern + 2 short lines, 3 Examples ('Label – one line'), a 3-step Rule, and a one-line CTA. Concrete > clever. Put a real number or contrarian claim in the hook."

CAPTION → "Write only the caption body for a post with this hook: '[HOOK]'. 1 scroll-stop line, 2-3 short value lines, 1 soft CTA. No hashtags, no notes, plain text."

TOPIC BANK → "Give me 30 scroll-stopping post topics for [NICHE], each a specific contrarian angle or a number-driven promise. One per line, no fluff."

Fill the blanks.

Run the loop.

```
HOOK: ___ / ___ / ___ (payoff)
REVEAL: ___ / ___
ASIDE: (___ contrarian)
PATTERN: ___ - ___ / ___
EXAMPLES: 01 ___ - ___ · 02 ___ - ___ · 03 ___ - ___
RULE: 1) ___ 2) ___ 3) ___
CTA: ___
```

- Pick one niche and one buyer.
- Topic-bank prompt → 30 topics.
- Brief prompt → fill the template (or let the AI fill it).
- Design it (your template / Canva) → carousel + reel.
- Caption prompt → caption + your hashtags.
- Queue 7 on hold; approve the batch; schedule daily.
- Add one product link in bio. That's the income.

BUILT FOR YOU

Want it built for **your** business?

Daimon Media builds the engine end to end — the templates, the brain, the queue, the scheduler — branded to you and running 24/7.
